Kibana、Elasticsearch 和 Logstash 搭建（mac版）

Logstash

```
brew install Logstash

brew services start logstash
```

Elasticsearch

通过使用brew info elasticsearch命令，我们可以查看到elasticsearch的版本号，以及对应的依赖(下面✅的部分就是对应的依赖包)，如果你查询到是❌，你使用brew install gradle@6命令安装即可

```
brew info elasticsearch

brew install gradle@6

brew install elasticsearch
```

kibana

```
brew search kibana

brew install kibana
```

composer elasticsearch

```
composer require elasticsearch/elasticsearch:"v7.11.0"
```

composer ruflin/elastica

```
composer require ruflin/elastica
```

启动Elasticsearch

```
elasticsearch

检查ES是否启动成功: http://localhost:9200/?pretty
```

启动kibana

```
kibana
```
